* Alternative information, including conveyance information, operational criteria, and tidal marsh acreage, are from the BDCP Administrative Draft EIR/EIS (February 2012).

EIR/EIS.

However, the BDCP Administrative Draft HCP/NCCP Effects Analysis (Ch. 5) includes a baseline called EBC2_LLT that appears to have the same assumptions as the No Action Alternative at Late Long-Term.

EBC2_LLT shows total exports of 4.441 million acre-feet per year [MAF/yr]. (source: BDCP HCP/NCCP administrative draft documents in Appendix 5.c in Attachment C.A).
